

360-degree Peer Review of Contribution to Team Effort

The submission of the deliverables up to this week required the application of the following three software development, project management and teamwork activities from each colleague in your team:

- Contribution to the design and implementation of the current sprint user stories.
- Contribution to the full range of project development activities (including but not limited to requirements capture, analysis and design, coding, testing and documentation).
- Contribution to group work and sharing of work, including group contract, participating in team and client meetings and preparing minutes, issues created and tracking progress; group interaction with client, including summary of meeting and agreed goals; critique of what has worked well and what needs to improve in terms of XP terms and contribution to all other group activities/processes and assignments

Based on the overall combination of the contribution above, rate your colleagues' as well as your own performance in the activities up to now.

IMPORTANT: You *must* assess all your colleagues as well as your own contribution. Use only whole numbers addressing the criteria below:

0	1	2	3	4	5
No contribution	Below satisfactory in 3 criteria or very poor in any activity	Satisfactory in 1 criteria and poor in 2 activities (none/ very poor)	Good in at least 2 criteria and poor in 1 activity	Excellent in at least 1 activity and good in 2 others	Excellent in all 3 activities

	Student ID	Name	Rating 0 to 5	Reason for rating
You	500468777	Dylan Herdan	5	<p>I think, along with Emma, I have had the largest contribution to the codebase in the project. I have been involved across the full stack with my contributions including:</p> <ul style="list-style-type: none"> • Implementing frontend UI • Implementing frontend fetches • Implementing frontend graph generation • Creating backend flask app • Creating preliminary backend prototypes • Refactoring preliminary functions to implement restful designs • Creating backend models to reflect frontend • Involved in database architecture <p>I also have been very active in managing the other members of the group, keeping them on track and outlining exactly what needed to be done in the future. In doing so I created notion epics, added and assigned tasks and was very active on the slack group.</p> <p>I also initiated contact with the client and have had activity on the wiki. I have been assigned to multiple XP roles in addition to programmer including client liaison, tracker, manager and doomsayer.</p>
2	510352392	Emma Talbot Rice	5	<p>Emma has been the other key programmer in the project. She was responsible for creating the react app and conceptnet endpoint. She also has taken notes in meetings and was responsible for setting up Notion which we use for task management and wiki articles.</p>
3	510470010	Mikaela De Stradis	4	<p>Mikaela has been very active in non technical tasks in the project. She has done a lot of the writing such as the user stories and the group agreement as well as the group report. She also is very active on the wiki. However she has had little contribution to the codebase.</p>

COMP3888/SOFT3888/ ISYS3888/COMP3988/INFO3600/COMP5615/CSEC3888

4	490549771	Seren Liu	4	Seren has been very organized throughout the project and has played a key role in keeping the group up to date on what is required. She had been very active on the wiki and has played a key role in other written tasks. She has had some contribution to the codebase however she has struggled with some tasks which I took over. She has not specialized in one aspect of the project but has played a role across all of them.
5	500468814	Chad Heyman	4	Chad has mostly focused on the database which he Xim and Justin have been contributing to. Other than that he has not had as much influence in the codebase as others. He is somewhat active on bitbucket commenting on code. He also has had some role in written assignments but not to the extent of others.
6	500455456	Xim O'Connell	3	Xim has also mostly focused on the database with Chad and Justin. Other than that he has not had much contribution to the code base. He is not very active on bitbucket and has had some influence in the written aspects.
7	500504950	Justin Kam	4	Justin has been helpful in a range of areas of the project. He has helped setting up the database and has done a lot of the written work for the assignment. He is also very active on slack and has passed on experience from other capstone projects.
